Project Name	A Comprehensive Measure of Well-being (HDI)
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of the implemented code for the HDI – A Comprehensive Measure of Well-being project. The solution demonstrates clean coding practices, modular design, and implements the core functional requirements of the system.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	[Paste your GitHub / GitLab or hosted link here]
Programming Language(s)	Python, JavaScript, Javascript
Framework(s) Used	Flask, Bootstrap
Key Features Implemented	User login, HDI calculation etc.
Pending / Incomplete Features	Advanced analytics, real-time data integration
Setup / Run Instructions	Install python libraries -> Run app.py -> Open the Flask application in a web browser

Code Quality Checklist

S.N o	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project follows a modular architecture with reusable components, meaningful variable names, and proper documentation. It successfully calculates the Human Development Index (HDI), displays graphical reports, and provides recommendations for improving overall well-being. The code is organized, maintainable, and suitable for future enhancements.
