

Solution Requirements

Date	05 July 2026
Team ID	xxxxxx xxxxxx
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Functional Requirements (FR) define what the system should do, while Non-Functional Requirements (NFR) define how well the system should perform. The following requirements are designed for the project "HDI – A Comprehensive Measure of Well-being."

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely register and log in to the system. High	High
2	Authorization levels	Different access for Admin and End Users.	High
3	External interfaces	<i>Connects with government/open data sources and APIs for HDI indicators.</i>	Medium

		<i>and APIs for HDI indicators.</i>	Medium
4	Transactions processing	Collects, validates, and calculates HDI using health, education, and income data.	High
5	Reporting	Generates HDI reports, graphs, and recommendations.	High
6	Business rules, etc.	Calculates HDI using standard Human Development Index methodology.	High
7	Compliance to laws or regulations	Protects user data and follows data privacy regulations.	High
8	<i>Other</i>	Allows users to monitor progress and download reports.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria

1	Performance & Speed	System should quickly calculate and display HDI results.	Response time less than 2 seconds
2	Scalability	System should support increasing users and data.	Supports 5,000+ concurrent users
3	Security & Data Privacy	User information must be encrypted and securely stored.	AES-256 encryption with secure authentication
4	Reliability & Availability	System should be available with minimal downtime	<i>99.9% uptime</i>
5	Usability & Accessibility	Users-friendly interface with easy navigation	Simple and responsive design
6	<i>Other</i>	Easy to update HDI formulas and add new features	Modular and maintainable code
