

Project Initialization and Planning Phase

Date	05-07-2026
Team ID	XXXXXX XXXXXX
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

A Customer Problem Statement is a structured, five-part framework used to define a challenge from the user's perspective rather than the developer's perspective. By framing the issue through a user's goals, frustrations, and emotions, it helps your team design a product or machine learning model that provides immediate, real-world value instead of just technical code.

Example:

I am	I'm trying to	But	Because	Which makes me feel
A student / working professional concerned about my overall well-being.	Understand and improve my well-being across health, education, income and living standards.	I find it difficult to track and measure all these factors together in one place.	The available information is scattered, complicated and not easy to understand.	Uncertain and unable to take the right steps towards improving my well-being.

Problem Statement (PS)	I am (Customer)	I'm trying to (Goal)	But (Barrier)	Because (Root cause)	Which makes me feel (Emotion)
HDI App	A health policy researcher tracking global well-being.	Predictive country HDI Category accurately.	The raw data contains missing null values and categorical text fields.	There isn't a pre-built ML pipeline or web tool to handle the data.	Anxious about presenting inaccurate development prejections to my committee.
