

Solution Architecture

Date	05 July 2026
Team ID	XXXXXX XXXXXX
Project Name	A Comprehensive Measure of Well-being (HDI)
Maximum Marks	5 Marks

Solution Architecture Diagram:

The Solution Architecture for the HDI – A Comprehensive Measure of Well-being project consists of a Presentation Layer, API Layer, Application Services, and Data Storage Layer. It enables users to securely access the system, calculate HDI scores, visualize results, and receive personalized recommendations.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	<i>Provides the user interface for data Input, dashboards, and reports</i>	<i>HTML, CSS, Bootstrap Javascript</i>
API Gateway	<i>Handles user requests and routes them to backend services securely</i>	<i>Flask REST API</i>
Core Logic Service	<i>Processes HDI data, calculates scores, generates reports and recommendations</i>	<i>Python, pandas, Numpy, Scikit-learn</i>
Database	<i>Stores user information, HDI indicators, calculation results, and reports</i>	<i>MySQL</i>
